País: España

Ciudad: Algemesí, Valencia.

Linkedin: www.linkedin.com/in/jose-romaguera-montero-a2a8a9201

Web Personal: <https://joseromaguera.com/>

Fecha de nacimiento: 20/04/2001

Programmer specialized in low-level systems, game engines, and real-time applications. Since 2017, I've delved into multiple areas of engine development, including 2D/3D graphics, physics, audio, tools, user interfaces, and efficient resource management, working primarily with C/C++.

I consider myself a generalist programmer, versatile and problem-solving oriented. I'm not intimidated by new challenges: if a project interests me, I fully commit to understanding its technical complexities and finding effective solutions, relying on the experience and intuition I've developed over the years.

More information and featured projects on my personal website: <https://joseromaguera.com/>

Work Experience

Glimmer Chain — Engine Programmer — Independent

June 2022 - September 2024

Founded and developed a fully polished, commercially released game on Steam. The entire project was built on a custom game engine written in C/C++ with Vulkan, focusing on performance, low-level architecture, and simplicity in design.

Technologies used: C/C++, MSVC, Vulkan, WinAPI, DirectSound, HLSL, SteamAPI.

Links: [Steam](#), [Blog](#)

Key features:

- Vulkan-based custom graphics engine.
- Physics engine developed from scratch.
- Custom immediate mode UI system.
- Dynamic asset and resource management.
- Architecture based on linear memory allocation.
- Sound engine built from scratch.
- Global ranking system with match replays.
- Framerate-independent simulation with minimal latency.
- Fully deterministic simulation.

Soul Breach — Game Programmer — Cosmic Spell

March 2022 - Present

Contributed to the development of an online mobile game using Unity game engine. I worked across various aspects of the project, from gameplay logic to mobile performance optimization.

Technologies used: C#, Unity, Kotlin, PlayFab.

Links: https://x.com/Soul_Breach

Responsibilities:

- Gameplay logic and UI programming.
- Development and integration of visual effects (VFX).
- Creation of internal tools.
- Performance optimization for mobile devices.
- Server communication via REST API.

Coding Day — Game Programmer — Dreamlight Games

December 2022 - June 2024

Lead programmer on a 2D survival horror game developed with Unity. Responsible for designing and implementing the core systems of the game.

Technologies used: C#, Unity.

Links: <https://x.com/DreamlightSpain>

Responsibilities:

- Design and implementation of the overall game architecture.
- Gameplay logic and UI programming.
- Development of a sequence system for narrative and gameplay events.

Featured Projects

Yov Programming Language

February 2025 - Present

Designing and implementing a custom programming language focused on batch scripting, with an emphasis on simplicity and portability.

Technologies used: C/C++, WinAPI.

Links: [GitHub](#)

Key Features:

- Interpreted language with syntactic and semantic analysis before execution.
- Full replacement of the standard library with custom-built utilities.
- No external dependencies.
- Executable size: ~100 KB.

Voxel Engine

2020 - 2022

Voxel Engine is a multiplayer sandbox game with a procedurally generated open world. Inspired by Minecraft, I created it as a personal learning project and to have fun. The game was built using my own custom engine.

Technologies used: C/C++, WinAPI, Vulkan, DirectSound, HLSL.

Links: [Blog](#)

Key Features:

- 3D graphics engine based on Vulkan.
- Custom UDP-based network protocol with stable connections and ordered message handling.
- Rendering distance up to 100 km.
- Procedural world generation.
- Custom-built 3D physics engine.

Education and languages

- **Vocational Training in Multi-platform Application Development:** IES Consuelo Aranda.
- **High School Diploma:** IES Bernat Guinovart.
- **Languages:** Spanish, valencian and english.

Skills

Programming Languages: C, C++, C#, Java, Python, Kotlin, HLSL, GLSL.

Programming Roles: Gráficos, sistemas, físicas, sonido, tools, gameplay, UI.

Technical Skills:

- Software architecture focused on simplicity and efficiency.
- Data oriented programming.
- Advanced virtual memory management.
- Multithreaded programming.
- Direct interaction with low-level kernel APIs.
- Graphics APIs: Vulkan, OpenGL, and DirectX11.
- Networking programming.
- SQL database management and usage.

About me

I am naturally curious and passionate. Since I started programming, I've felt the need to understand how computers really work, from the most fundamental level.

I see myself as a problem-solver, always looking for effective answers. I'm not intimidated by new challenges; if a project interests me, I fully commit to understanding its technical complexities and finding effective solutions, drawing on the experience and intuition I've developed over time.

In the long term, I want to keep learning and work toward a life with more freedom and independence. Being able to work on what I love and stay close to the people I care about is all I need.
